Download

o print driver. I use Vista x64 and a ZD-Robo. I just downloaded the free version of the firmware. I did not see a firmware update option, so I assume the free version does not have that feature. I can send you my driver package so you can see what options it has. Hi Warren, I downloaded the beta but when it tried to download the firmware it said it failed. I think it is a PC firewall problem. The firmware update on the website told me to do a system restore, I am not sure if that would have fixed it. I have both printers and can confirm they work on my test PC. I downloaded the drivers via the free trial, took about 10 mins to load and it did the firmware update. When I started up the software on my test PC it detected the driver and then the ZD driver did the firmware update. I'd been downloading firmware updates from the website to flash on the ZD-Robo but they didn't work, presumably because I don't have the right version of ZD software. Your beta firmware has been released and is now available for download. If you already have a beta version or the 1.1.0 RC4 version, you do not need to do anything. If you have a different version, follow the instructions below. These instructions will update the firmware, print and plotter drivers, and install the VuePrint Client for use with your new firmware version. Ensure that you have the latest version of the Zebra ZD-Robo, ZD-Robo or ZD-6000 software and the VuePrint Client installed on your PC. The ZD-Robo and ZD-6000 are the same except the ZD-6000 has a separate Network LCD Control Module (LCM) and LCD Screen. The ZD-Robo firmware update does not require the driver to be installed on the PC. This is a major difference with the ZD-6000. If you do not have the VuePrint Client installed, please download the client from and install it on the PC. The VuePrint Client enables you to monitor the status of the Zebra printer(s) and plotter(s) and access other useful features. Download the firmware from the following link: <https>

September 22, 2004 - Software compatible with Vp 500 plotter driver. File is 100% safe, downloaded from a secure source and tested by Eset antivirus ! March 22, 2005 - Microsoft Windows Vista (2003 or later) - Microsoft Windows XP (2001 or later) - Windows XP does not support the *.hpgl file format. If you are not sure which version of your operating system, we recommend using the HP USB Disk Storage Format Tool (<http://www.hpe.com/support/downloads/usbdisk/>) (Windows versions). If you have questions, contact HP technical support (<http://www.hp.com/support>). fffad4f19a
